### ORIGINAL ARTICLES

- |     |                                                                                                                   |                   |
|-----|-------------------------------------------------------------------------------------------------------------------|-------------------|
| 395 | Rituximab-induced psoriasis vulgaris                                                                              | O. Abe et al.     |
| 399 | Psoriasis vulgaris with ixekizumab-induced dyshidrotic eczema                                                     | T. Endo et al.    |
| 403 | Esophageal candidiasis in a psoriatic patient treated with bimekizumab                                            | H. Okada et al.   |
| 407 | Napkin psoriasis                                                                                                  | T. Sato et al.    |
| 411 | Impetigo herpetiformis harbouring <i>IL36RN</i> and <i>CARD14</i> mutations successfully treated with secukinumab | S. Sawada et al.  |
| 416 | Progression from psoriasis vulgaris to generalized pustular psoriasis associated with hypothyroidism              | N. Ebi et al.     |
| 419 | Generalized pustular psoriasis associated with bullous pemphigoid                                                 | S. Hara et al.    |
| 423 | Generalized pustular psoriasis with a background of autoimmune hepatitis                                          | N. Noguchi et al. |

### CASE REPORTS

- |     |                                                                                                                                               |                     |
|-----|-----------------------------------------------------------------------------------------------------------------------------------------------|---------------------|
| 431 | Erythema nodosum leading to the diagnosis of Crohn's disease                                                                                  | A. Takayama et al.  |
| 435 | Hypereosinophilic syndrome with erythroderma successfully treated with dupilumab                                                              | T. Shimizu et al.   |
| 439 | IgA vasculitis complicated by cerebral infarction and small intestinal hemorrhage after the skin rash has been ameliorated                    | K. Yoshida et al.   |
| 445 | Surgical treatment for skin ulcers occurring at the site of pneumococcal vaccination                                                          | K. Nonaka et al.    |
| 449 | Pyoderma gangrenosum presenting with aseptic abscess and osteomyelitis                                                                        | I. Uno et al.       |
| 453 | Muir-Torre syndrome complicated by florid cutaneous papillomatosis                                                                            | R. Nakamura et al.  |
| 457 | Annular atrophic lichen planus on the lower leg successfully treated with ultraviolet therapy                                                 | R. Iwanaga et al.   |
| 463 | Cheilitis granulomatosa successfully treated with excimer light and laser                                                                     | A. Kanemura et al.  |
| 467 | Suspected muscular dystrophy mainly affecting the triceps surae muscle revealed after the examination of the cause of sclerosing panniculitis | M. Kinoh et al.     |
| 471 | Tubulopapillary cystic adenoma with apocrine differentiation                                                                                  | R. Tanaka et al.    |
| 475 | Squamous cell carcinoma on the lower leg that needed differentiation from chronic venous leg ulcer                                            | Y. Kinoshita et al. |
| 479 | Dermatofibroma between the eyebrows that required differentiation from keloids                                                                | Y. Takasaki et al.  |
| 483 | Superficial angiomyxoma on the left occiput                                                                                                   | M. Kato et al.      |
| 487 | Localized multiple glomus tumor on the right hypothenar region                                                                                | T. Nakamura et al.  |
| 491 | Adult-type xanthogranuloma on the left eyebrow region                                                                                         | R. Kamohara et al.  |
| 495 | Cutaneous Rosai-Dorfman disease successfully treated with intralesional corticosteroid therapy                                                | Y. Minami et al.    |
| 499 | Primary intranasal melanoma that achieved complete response to nivolumab and radiation therapy                                                | K. Nonaka et al.    |
| 503 | Chronic active Epstein-Barr virus disease successfully treated with hematopoietic stem cell transplantation                                   | Y. Nishimura et al. |
| 506 | Multiple subcutaneous abscesses caused by <i>Serratia marcescens</i> in a patient with systemic lupus erythematosus                           | M. Takenaka et al.  |
| 511 | Kerion celsi considered to be infected at a cat cafe                                                                                          | K. Tsuda et al.     |
| 515 | Asymptomatic intestinal amebiasis complicated by anal cutaneous amebiasis                                                                     | R. Ueno et al.      |

### MINI REPORT

- |     |                                                                                            |                   |
|-----|--------------------------------------------------------------------------------------------|-------------------|
| 520 | Perianal chemical injury due to accidental ingestion of thinner in a patient with dementia | J. Nakano et al.  |
| 522 | Basal cell carcinoma on perianal region                                                    | S. Katsuki et al. |
| 524 | Enterocutaneous fistula simulating a lesion of peristomal pyoderma gangrenosum             | M. Honma et al.   |
