

## CONTENTS

**Theme of this month : Hepatocarcinogenesis in the Era of Elimination of Hepatitis Viruses**

|                                                                                                                                          |                                              |     |
|------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------|-----|
| Editorial                                                                                                                                | <i>Kazuhiko Koike</i>                        | 863 |
| Epidemiology of Hepatitis C in Japan and Road to HCV Elimination                                                                         | <i>Junko Tanaka</i>                          | 865 |
| Epidemiology of HBV Infection in Japan —The Latest Therapeutic Agents and Vaccine Topics                                                 | <i>Hiroshi Yatsushashi</i>                   | 873 |
| Epidemiology of NAFLD/NASH in Japan                                                                                                      | <i>Yoshio Sumida, et al</i>                  | 880 |
| Transition in the Etiology of Liver Cirrhosis in Japan                                                                                   | <i>Hirayuki Enomoto, et al</i>               | 888 |
| Impact of MAFLD on Hepatic Fibrosis and Hepatocellular Carcinoma                                                                         | <i>Takumi Kawaguchi, et al</i>               | 894 |
| Trend in the Etiology of Primary Liver Cancer                                                                                            | <i>Ryosuke Tateishi</i>                      | 901 |
| The Development of Hepatocellular Carcinoma in Patients with Hepatitis C Virus Infection Who Had Achieved Sustained Virological Response | <i>Shun Ishido, Masayuki Kurosaki, et al</i> | 907 |
| Mechanism of Liver Carcinogenesis after HCV Elimination                                                                                  | <i>Hideki Aizaki, et al</i>                  | 914 |
| Risk Factors of Hepatocellular Carcinoma Incidences During Nucleos(t)ide Analogues Treatment for Chronic Hepatitis B                     | <i>Tetsuya Hosaka</i>                        | 921 |
| Current Status of Hepatocarcinogenesis in NAFLD/NASH and its Risk Factors                                                                | <i>Katsutoshi Tokushige</i>                  | 927 |
| Current Insights on Non-B, Non-C Hepatocellular Carcinoma                                                                                | <i>Takuma Nakatsuka and Ryosuke Tateishi</i> | 933 |
| Precautions in Systemic Therapy in Patients with NAFLD-HCC                                                                               | <i>Teiji Kuzuya, et al</i>                   | 940 |

**Series**

|                                                                                                                                                        |                                              |     |
