What on Earth is This? part 3

Introductory remarks	<i>Taiji Akamatsu</i>	350
I. Pharynx and Esophagus		
Ulcerative lesion in upper pharynx—cancer or not?	<i>Naotaka Fujita</i>	355
An elongated polypoid lesion in the pharynx	<i>Hirohisa Takeuchi et al.</i>	357
A club-shaped subepithelial lesion in the pharynx	<i>Hirohisa Takeuchi et al.</i>	359
A lesion in the oropharynx half protruded and half depressed	<i>Hirohisa Takeuchi et al.</i>	361
A protrusion in the pharynx	<i>Maya Ishizawa et al.</i>	363
A severely swollen tonsil looking like a submucosal tumor	<i>Miwako Arima et al.</i>	365
A reddish area located on the protrusion due to strong extrinsic compression in the upper thoracic esophagus	<i>Miwako Arima et al.</i>	367
A flat lesion characterized by clustered dilated vessels	<i>Shun Nakagome et al.</i>	369
A whitish protruding esophageal lesion surrounded by blackish spots	<i>Aya Narumi et al.</i>	371
Are there teeth in the esophagus!?	<i>Kenro Kawada et al.</i>	373
A whitish elevated lesion with shaggy cone-like appearance	<i>Shunsuke Miura et al.</i>	375
A semi-pedunculated polyp in the esophagus	<i>Kazuya Miyaguchi et al.</i>	377
Strong resistance during the insertion of an overtube	<i>Hiroshi Yamato et al.</i>	379
A blackish tree-like lesion in the esophagus: Is it a submucosal tumor?	<i>Yorinari Ochiai et al.</i>	381
Corkscrew esophagus	<i>Shiko Kuribayashi et al.</i>	383
Multiple brownish areas in the esophagus	<i>Naoko Kitazawa et al.</i>	385
A clot on the left wall of the upper thoracic esophagus with extrinsic compression	<i>Fumito Harada et al.</i>	387
II. Stomach		
Gastric ulcerative lesion emerging over a short-term course	<i>Yuichiro Kemmoto et al.</i>	391
Transient discoloring of the gastric mucosa during endoscopy	<i>Takato Horio et al.</i>	393
Whitish granular flat-elevated lesion	<i>Ryosuke Kaji et al.</i>	395
Giant rugae of the stomach undiagnosable despite repeated biopsies	<i>Hiromune Katsuda et al.</i>	397
Gastric depressed lesion with overflowing mucus	<i>Kento Osawa et al.</i>	399
Be careful of a blackish ulcerative lesion!	<i>Mitsuru Otsuka et al.</i>	401
A verrucous erosion-like lesion in the gastric antrum without mucosal atrophy	<i>Mitsuru Kaise et al.</i>	403
The gastric antrum looks whitish and is associated with multiple ulcers!	<i>Ryo Shirai et al.</i>	405

The gastric folds are swollen like welts!	<i>Hiroyuki Imaeda et al.</i>	407
Multiple ulcerative lesions in the stomach	<i>Masato Takemoto et al.</i>	409
A giant ulcerative lesion in the stomach	<i>Taiji Akamatsu et al.</i>	411
Multiple protruding lesions in the stomach	<i>Takahiro Muramatsu et al.</i>	413
Multiple protruding lesions in the stomach and duodenum	<i>Takahiro Muramatsu et al.</i>	415
A giant antral mass obscuring the forward endoscopic view	<i>Tomohiro Shimada et al.</i>	417
<i>H. pylori</i> -negative nodular gastritis	<i>Naoko Kitazawa et al.</i>	419
Multiple erythematous elevations	<i>Keiichi Oshima et al.</i>	421
A gastric submucosal tumor (SMT) with diagnostic difficulty followed over time	<i>Reona Kawamura et al.</i>	423
Discoloration of the gastric mucosa: What is this?	<i>Hanami Machida et al.</i>	425
A four-centimeter mass rapidly grown in the residual stomach after surgical resection for an early cancer	<i>Kazutoshi Higuchi et al.</i>	427
A submucosal tumor with a volcano's crater-like depression	<i>Eriko Koizumi et al.</i>	429
A polypoid lesion in the <i>H. pylori</i> -negative stomach	<i>Yasuhiko Mizuguchi et al.</i>	431
A whitish lesion in the stomach	<i>Yasuhiko Mizuguchi et al.</i>	433
A protruding lesion covered with mucosa with intestinal metaplasia	<i>Keitaro Takahashi et al.</i>	435
A reddish elevated lesion appeared after the eradication for <i>H. pylori</i>	<i>Keitaro Takahashi et al.</i>	437
An elevated lesion which appeared in the fundic gland area without mucosal atrophy	<i>Keitaro Takahashi et al.</i>	439
Another channel by the pylorus?	<i>Jun Omori et al.</i>	441
Submucosal tumor-like protrusion in the gastric antrum	<i>Eriko Koizumi et al.</i>	443
A gastric lesion with a reddish depression	<i>Toyokazu Fukunaga et al.</i>	445

III. Duodenum and Small Intestine

A lesion in the small intestine which changed in shape in a short period	<i>Tatsuya Mitsui et al.</i>	449
Aggregation of small whitish spots in the duodenum	<i>Yohei Kojima et al.</i>	451
A bleeding lesion in the horizontal part of the duodenum	<i>Yosuke Minegishi et al.</i>	453
A linear object rolled up within a duodenal ulcer	<i>Sarina Yamada et al.</i>	455
The villi are atrophied throughout the small intestine!	<i>Norio Yamaguchi et al.</i>	457
Convergence of folds in the descending part of the duodenum	<i>Jun Nakamura et al.</i>	459
A duodenal ulcer covered with mucus	<i>Tsunetaka Kato et al.</i>	461
A gentle-hill-like lesion with an opening on the top	<i>Mitsuru Kaise et al.</i>	463
A large tumor in the horizontal part of the duodenum	<i>Taiji Akamatsu et al.</i>	465
A swollen and ulcerated duodenal papilla	<i>Kyoko Asano et al.</i>	467
A creeping snake-like lesion in the small intestine	<i>Hiroaki Satake et al.</i>	469
A big protrusion in the descending duodenum which repeatedly caused pancreatitis	<i>Hirokazu Naohara et al.</i>	471
Isn't it a duodenal adenoma?	<i>Yutaka Mitsunaga et al.</i>	473
A giant polyp in the duodenum	<i>Makoto Arashiyama et al.</i>	475
A large pedunculated polyp in the duodenum	<i>Yuki Koyo et al.</i>	477

A semi-pedunculated submucosal tumor-like lesion in the duodenum	<i>Ai Katsumi et al.</i>	479
IV. Large Intestine		
The head of a pedunculated polyp is fused to the anastomotic site of the rectum!	<i>Jun Omori et al.</i>	483
A rectal lesion with a submucosal tumor-like appearance	<i>Taishi Okumura et al.</i>	485
A blackish nodular lesion in the rectum	<i>Yuki Yonemoto et al.</i>	487
A smooth-surfaced flat-elevated lesion in the hepatic flexure of the colon	<i>Yuki Yonemoto et al.</i>	489
A protruding lesion in the anal canal	<i>Yuki Yonemoto et al.</i>	491
The rectum looks blackish!	<i>Yuki Noguchi et al.</i>	493
Ulcerative lesions in the cecum	<i>Yuka Nakamura et al.</i>	495
A dark-red protruding mass in the sigmoid colon	<i>Takashi Morise et al.</i>	497
What is causing the intussusception?	<i>Yukari Kanemitsu et al.</i>	499
Is this rectal prolapse?	<i>Minoru Oda et al.</i>	501
A case presenting with bloody stool	<i>Hiroshi Kashida et al.</i>	503
A rapidly grown lesion in a patient with ulcerative colitis	<i>Hiroshi Kashida et al.</i>	505
Small ulcerative lesions found in a patient who was undergoing rectal ESD	<i>Hiroshi Kashida et al.</i>	507
A flat lesion scheduled to be treated by endoscopic submucosal dissection	<i>Hiroshi Kashida et al.</i>	509
A case of colitis where a whitish coating was prominent	<i>Hiroshi Kashida et al.</i>	511
Multiple yellowish lesions in the colorectum	<i>Hitomi Matsuki et al.</i>	513
Multiple reddish elevated lesions distributed throughout the colon	<i>Satoru Mizutani et al.</i>	515
A protruding lesion developing on the scar after surgery for a rectal fistula	<i>Ryosuke Kawagoe et al.</i>	517
A flat-elevated rectal lesion in a patient who was referred for treatment	<i>Maki Saihara et al.</i>	519
A reddish flat-elevated lesion in the rectum	<i>Maki Saihara et al.</i>	521
Multiple ulcerative lesions in the ileum and duodenum	<i>Masakatsu Fukuzawa</i>	523
Multiple warts in the rectum	<i>Megumi Matsumoto et al.</i>	525
An irregular submucosal-tumor-like protrusion arising in an area affected by ulcerative colitis	<i>Shoma Murata et al.</i>	527
Multiple elevated lesions in the colon	<i>Rei Mizobe et al.</i>	529
Multiple white elevated lesions in the anal lesion	<i>Yuki Kubo et al.</i>	531
A lesion in the appendiceal orifice presenting with type V _N pit pattern: Is it cancer?	<i>Hirokazu Naohara et al.</i>	533
V. Biliopancreatic System		
A suddenly emerged lesion in the gallbladder	<i>Ryuichi Watanabe et al.</i>	537
Multiple cystic lesions which occupy the entire pancreas	<i>Takahiro Shin et al.</i>	539
Is this an ordinary common bile duct stone?	<i>Kento Shionoya et al.</i>	541
Are these really common bile duct stones?	<i>Takato Inoue et al.</i>	543
